

Beneath you will find an overview of the materials that can be considered to be “UV resistant”

Item description	Colour	Level of resistancy
GrainDuct twinwall cable-protection in PE	Black	Good

UV resistance should be interpreted as: suitable for application above ground, free of repeated bending, pulling-forces and / or further loads.

The above mentioned materials are developed to be processed underground, the colour ensures that an UV resistance is achieved.

GrainPlastics B.V. cannot be held liable on the basis of above mentioned info.

Choice of materials, appliance and maintenance are the responsibility of the customer or prescriber. Advice is based on theoretical situations and in case of doubt, tests will have to take place in the concerning setting.
